G-LINE ULTRA SERIES
HOSE AND FITTINGS

GOODRIDGE

G-Line Ultra series

G-Line Ultra 860 & 960 are the most robust hoses in the Goodridge range; used by motorsport teams globally who require the highest level of protection from temperature, high pressure, vacuum resistance and kink resistance. Similar to the Goodridge G-Line XF range, G-Line Ultra features a smooth bore, externally convoluted, carbon impregnated, anti-static PTFE liner. In addition, the G-Line Ultra range features a helically wound high tensile 316 stainless steel coil, seated between the external convolutions of the PTFE hose liner. The coil increases burst pressures, vacuum resistance and kink resistance. G-Line Ultra is compatible with 960 crimp fittings and must be assembled using specialist equipment. Double swivel tail options are available to aid with alignment. The G-Line Ultra hose range is a popular choice for leading motorsport teams.

Benefits:

- Uninterrupted flow
- Burst pressure up to 6090 PSI / 420 BAR (AN-06)
- Temperature resistance from -73°C to +260°C
- Vacuum resistance to -13.05 PSI / -0.9 BAR
- Bend radius to 19 mm (AN-06)

Features:

- Enlarged smooth bore
- Stainless steel helically wound coil
- PTFE lined
- Aramid fibre / Stainless steel braided option
- SAE J1737 compliant

G-LINE ULTRA 960

The G-Line Ultra hose range is the 'go to' hose for high burst pressure, vacuum and kink resistance.

The G-Line Ultra range features a helically wound high tensile 316 stainless steel coil, seated between the external convolutions of the smooth bore PTFE hose liner. This feature increases burst pressures, vacuum resistance and kink resistance over a conventional PTFE lined smooth bore hose.

The 960 version features an aramid fibre outer braid, making the hose ideal when weight saving is critical.

G-LINE ULTRA 860

The G-Line Ultra hose range is the 'go to' hose for high burst pressure, vacuum resistance and kink resistance.

The G-Line Ultra range features a helically wound high tensile 316 stainless steel coil, seated between the external convolutions of the smooth bore PTFE hose liner. This feature increases burst pressures, vacuum resistance and kink resistance over a conventional PTFE lined smooth bore hose.

The 860 version features a stainless-steel outer braid, offering the highest level of protection from abrasion, tighter bend radius and higher temperature resistance.

600 HOSE SERIES (AN02 & AN03)

The 600 series hose range is a PTFE lined hose, wrapped in a Stainless-Steel braid; designed for brake and clutch applications.

(AN-04, AN-06 & AN-08 600 series hoses and fittings are available in Medium Pressure and High Pressure variants.)

1. SELECT FITTINGS

Select the appropriate fittings, adaptors and T-Pieces. *Fittings can be aligned on installation.*

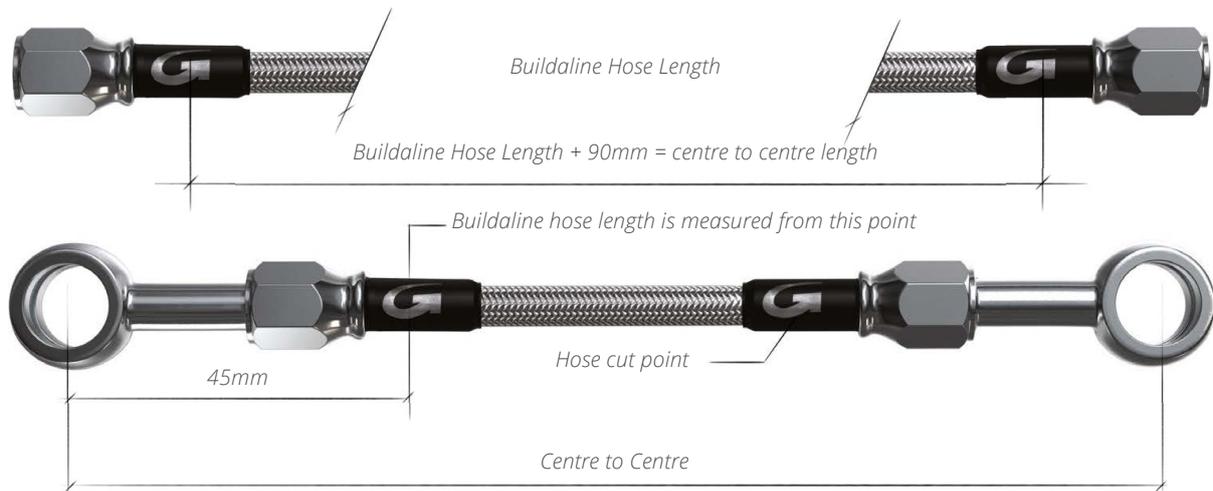

2. SELECT REQUIRED HOSE LENGTH

Buildaline hoses are manufactured from 200mm to 1700mm (25mm increments). Measuring from the existing centre of banjo bolt to existing centre of banjo bolt, deleting 90mm to take account of the fittings at each end, will give you the correct Buildaline length to order.

**Custom lengths available in 25mm increments. Please contact us.*

**Remember to consider suspension travel when selecting hose lengths.*

3. SELECT BOLTS

4. SELECT ANCILLARIES

Select the appropriate fittings, adaptors and T-Pieces.

INSTALLATION GUIDE

1. Fit in place the banjo adaptors with the bolts and the correct amount of washers. Our recommended torque setting for this is 14 – 24 ft/lbs. This torque setting is advisory for the fittings, **NOT** for your master cylinder or calipers. **Care must be taken not to damage either your master cylinder or calipers.**

Please also ensure that you have chosen the correct threaded bolt for your application.

2. Locate the correct length hose. Route the hose safely, ensuring that it cannot be damaged by daily use of your bike, when the steering is at full lock. Use tube clamps if necessary (**SBKPLCC-05**) to help with the routing.

3. Screw the hose onto the banjo adaptors, making sure that it has been fully tightened.

Tip - As a rough guide, finger tight then a ¼ turn will give you 14 ft/lbs.

4. P-Clips (**SBKPLCC-05**) are available to ensure that your hoses are routed correctly.

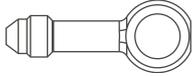

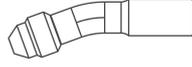

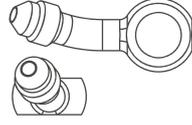

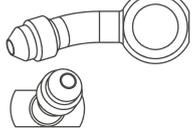

5. Bleed your brakes correctly and carefully following any special bleeding sequence as recommended in your bike manual. Use the manufactures recommended brake fluid. Goodridge recommend a high quality DOT 4 fluid

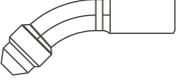

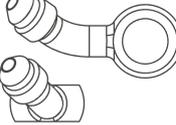

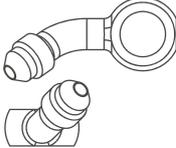

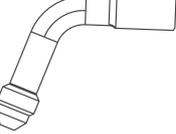

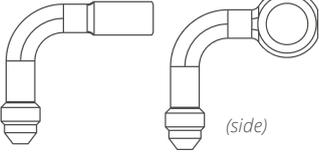

6. TEST FOR ANY LEAKS

7. After using your bike for the first time, we recommend that you give your brakes and fittings a thorough inspection to check for any leaks.

If any leaks are present, tighten your fittings and repeat step 5 once more.

G-Link Bayonet type

The bayonet type uses a locking mechanism designed for single handed operation, a 'push and twist' of the outer sleeve will couple/uncouple the G-Link with no separate actuation required for operation. Both halves, plug and socket, are equipped with self-acting valves to stop fluid loss and air ingress. The bayonet type can hold pressure up to 200 bar (AN-03). Available in JIC/UNF AN-03, AN-04, AN-06 & AN-08 thread fitments.

Plugs and Sockets are ordered separately

Please note:

AN-04 and AN-06 thread fitments are available with 3.5/5.5mm & 5.5/8.5mm internal diameter body types respectively.

G-Link Pull type

The pull type uses a locking mechanism designed for single handed operation, a 'pull' of the outer sleeve will couple/uncouple the G-Link with no separate actuation required for operation. To verify the correct connection, the female half is equipped with a green indicator ring. The indicator ring can alternatively be replaced by a retaining clamp. (This can only be attached when the halves are coupled and eliminates the risk of unintentional coupling). Additionally, the whole operating mechanism is O-ring sealed to achieve particular suitability for rough conditions and to reduce environmental effects. Both halves, plug and socket, are equipped with self-acting valves to stop fluid loss and air ingress. The pull type can hold pressure up to 150 bar (AN-06 & AN-08). Available in JIC/UNF AN-06, AN-08 & AN-12 thread fits.

WIGGINS / HYDRAFLOW
FLEXIBLE COUPLINGS

GOODRIDGE

Wiggins and Hydraflow

Goodridge supplies Adel Wiggins and Hydraflow quick release couplings; typically used for connecting hard tube to flexible hose of 0.5" - 4" outer diameter. Popular for use in motorsport, aerospace, marine and industrial applications, both connectors are operable using one hand and feature locking latch designs to eliminate the need for using locking safety wire; saving a considerable amount of time when critical. Suitable for low/medium pressure applications – operating pressure 125 PSI. Weld ferrules are available for both connector types, from AN-08 to AN-64 fitments. O-Rings are required and available separately.

Why regulate engine oil temperature?

The engine oil temperature has a direct bearing on performance and engine lifespan. If the oil is too cool it causes excessive frictional drag, hindering performance and not getting the oil hot enough to burn off contaminants. If the oil is too hot it can't lubricate the engine correctly, causing loss of oil pressure; resulting in serious engine wear and damage.

What causes engine oil temperature to fluctuate?

Increase in engine RPM for prolonged periods of time – track driving/racing.

Obstruction of airflow to the sump or existing cooler, modification from original specifications.

Oil circulation through an added turbocharger/supercharger can dissipate heat from the oil system.

What is the optimum oil temperature?

Optimum oil temperatures differ between applications.

Please consult your OEM manufacturer / engine builder for more information.

The Setrab logo is rendered in a bold, stylized font with a white outline and a dark grey fill. The letters are thick and blocky, with a slight shadow effect. The background of the entire page is a dark grey, and there is a faint, light grey line-art illustration of an oil cooler assembly, showing various components like the radiator core, mounting brackets, and hoses, positioned behind the text.

Mobile workshop case study *Roger Clark Motorsport*

The Gobstopper 3 project isn't just a car, it's a research and development exercise, requiring a complex plumbing solution. We enlisted the help of the Goodridge mobile workshop to visit site, prototype complex assemblies on the car, manufacture the assemblies on site and install them on the vehicle.

Not only were the team able to find solutions to complex problems, the project was completed quickly, when time was critical.

CASE STUDY

GOODRIDGE

Hyundai

Established in 2012, located in Alzenau, near Hyundai Europe's base in Offenbach, you will find Hyundai Motorsport GmbH headquarters.

Hyundai began building a World Rally Car in 2013, based on the i20 chassis. It didn't take long before the team put the i20 WRC on the podium, that coming with third place in Rally Mexico before claiming a first WRC win at Rallye Deutschland.

Established as front runner in the WRC the team founded their Customer Racing department in 2015. The new program began with the i20 R5 rally car, which made a competitive debut in September 2016.

At the same time Hyundai began design work on a new project, the i30 N TCR, to compete in the TCR category.

The i30 N TCR, based on the road going i30 chassis, marked the second customer motorsport project for Hyundai and their first move into circuit racing.

Built to compete in the TCR series, the car needed to be front wheel drive, using a turbo charged engine with displacement between 1600-2000CC, maximum power output 350BHP.

The finished project utilises a transverse mounted two-litre turbocharged engine, connected to a six-speed sequential gearbox and limited slip differential. Braking is taken care of using Brembo six piston monobloc brake calipers with 380mm brake discs on the front and two piston monobloc calipers with 278mm ventilated discs on the rear, all working in conjunction with spherical bearing- mounted Brembo master cylinders.

Goodridge

Where do Goodridge fit into the project?

Established in 1969, Goodridge are a fluid transfer systems manufacturer, specialising in a 'design & build' approach, alongside a comprehensive range of catalogued fluid transfer product for Motorsport, Performance and niche OEM, automotive and motorcycle applications.

The Hyundai i30 N TCR fitted into Goodridge's specialist remit, supplying fluid transfer assemblies for the following systems on both a 'build from spec' basis and in some areas, supplying catalogue product.

- Braking system • Clutch system
- Fuel system • Air jack system

The braking system utilises Goodridge 836 stainless steel hardline, CNC machine formed to Hyundai Motorsport Customer Racing's specifications.

In conjunction, Goodridge 600 series PTFE lined stainless steel braided hose and 600 series crimp fittings are assembled, crimped and pressure tested prior to being fitted to the vehicle.

The fuel system uses Goodridge G-Line XF 910 hose, combined with Goodridge 711 series aluminum crimp fittings. G-Line XF 910 hose is one of Goodridge's 'go to' hoses for high level motorsport, featuring an aramid fibre braid and PTFE liner, making it incredibly light weight and safe to run 'in cockpit'. The perfect choice for this project.

Goodridge 711 series aluminum crimp fittings are designed for use with the G-Line 910 XF hose, again focusing on providing the greatest weight saving possible, without compromising reliability.

The air jack system, standard equipment in the TCR series, uses Goodridge 836 Polyamide coated Hycot™ aluminium hardline, again CNC machined at Goodridge HQ in the UK. The hardline is fitted with Goodridge 836 re-usable aluminium fittings; these are light weight and do not require the tube to be flared for installation.

Hyundai i30 N TCR 2020 livery

The Result

Goodridge provided a bespoke, functional, light weight and reliable plumbing solution that played a part in the i30 N TCR's victory in the 2018 WTCR, with Hyundai customers winning both the teams' and drivers' titles in the 2018 series.

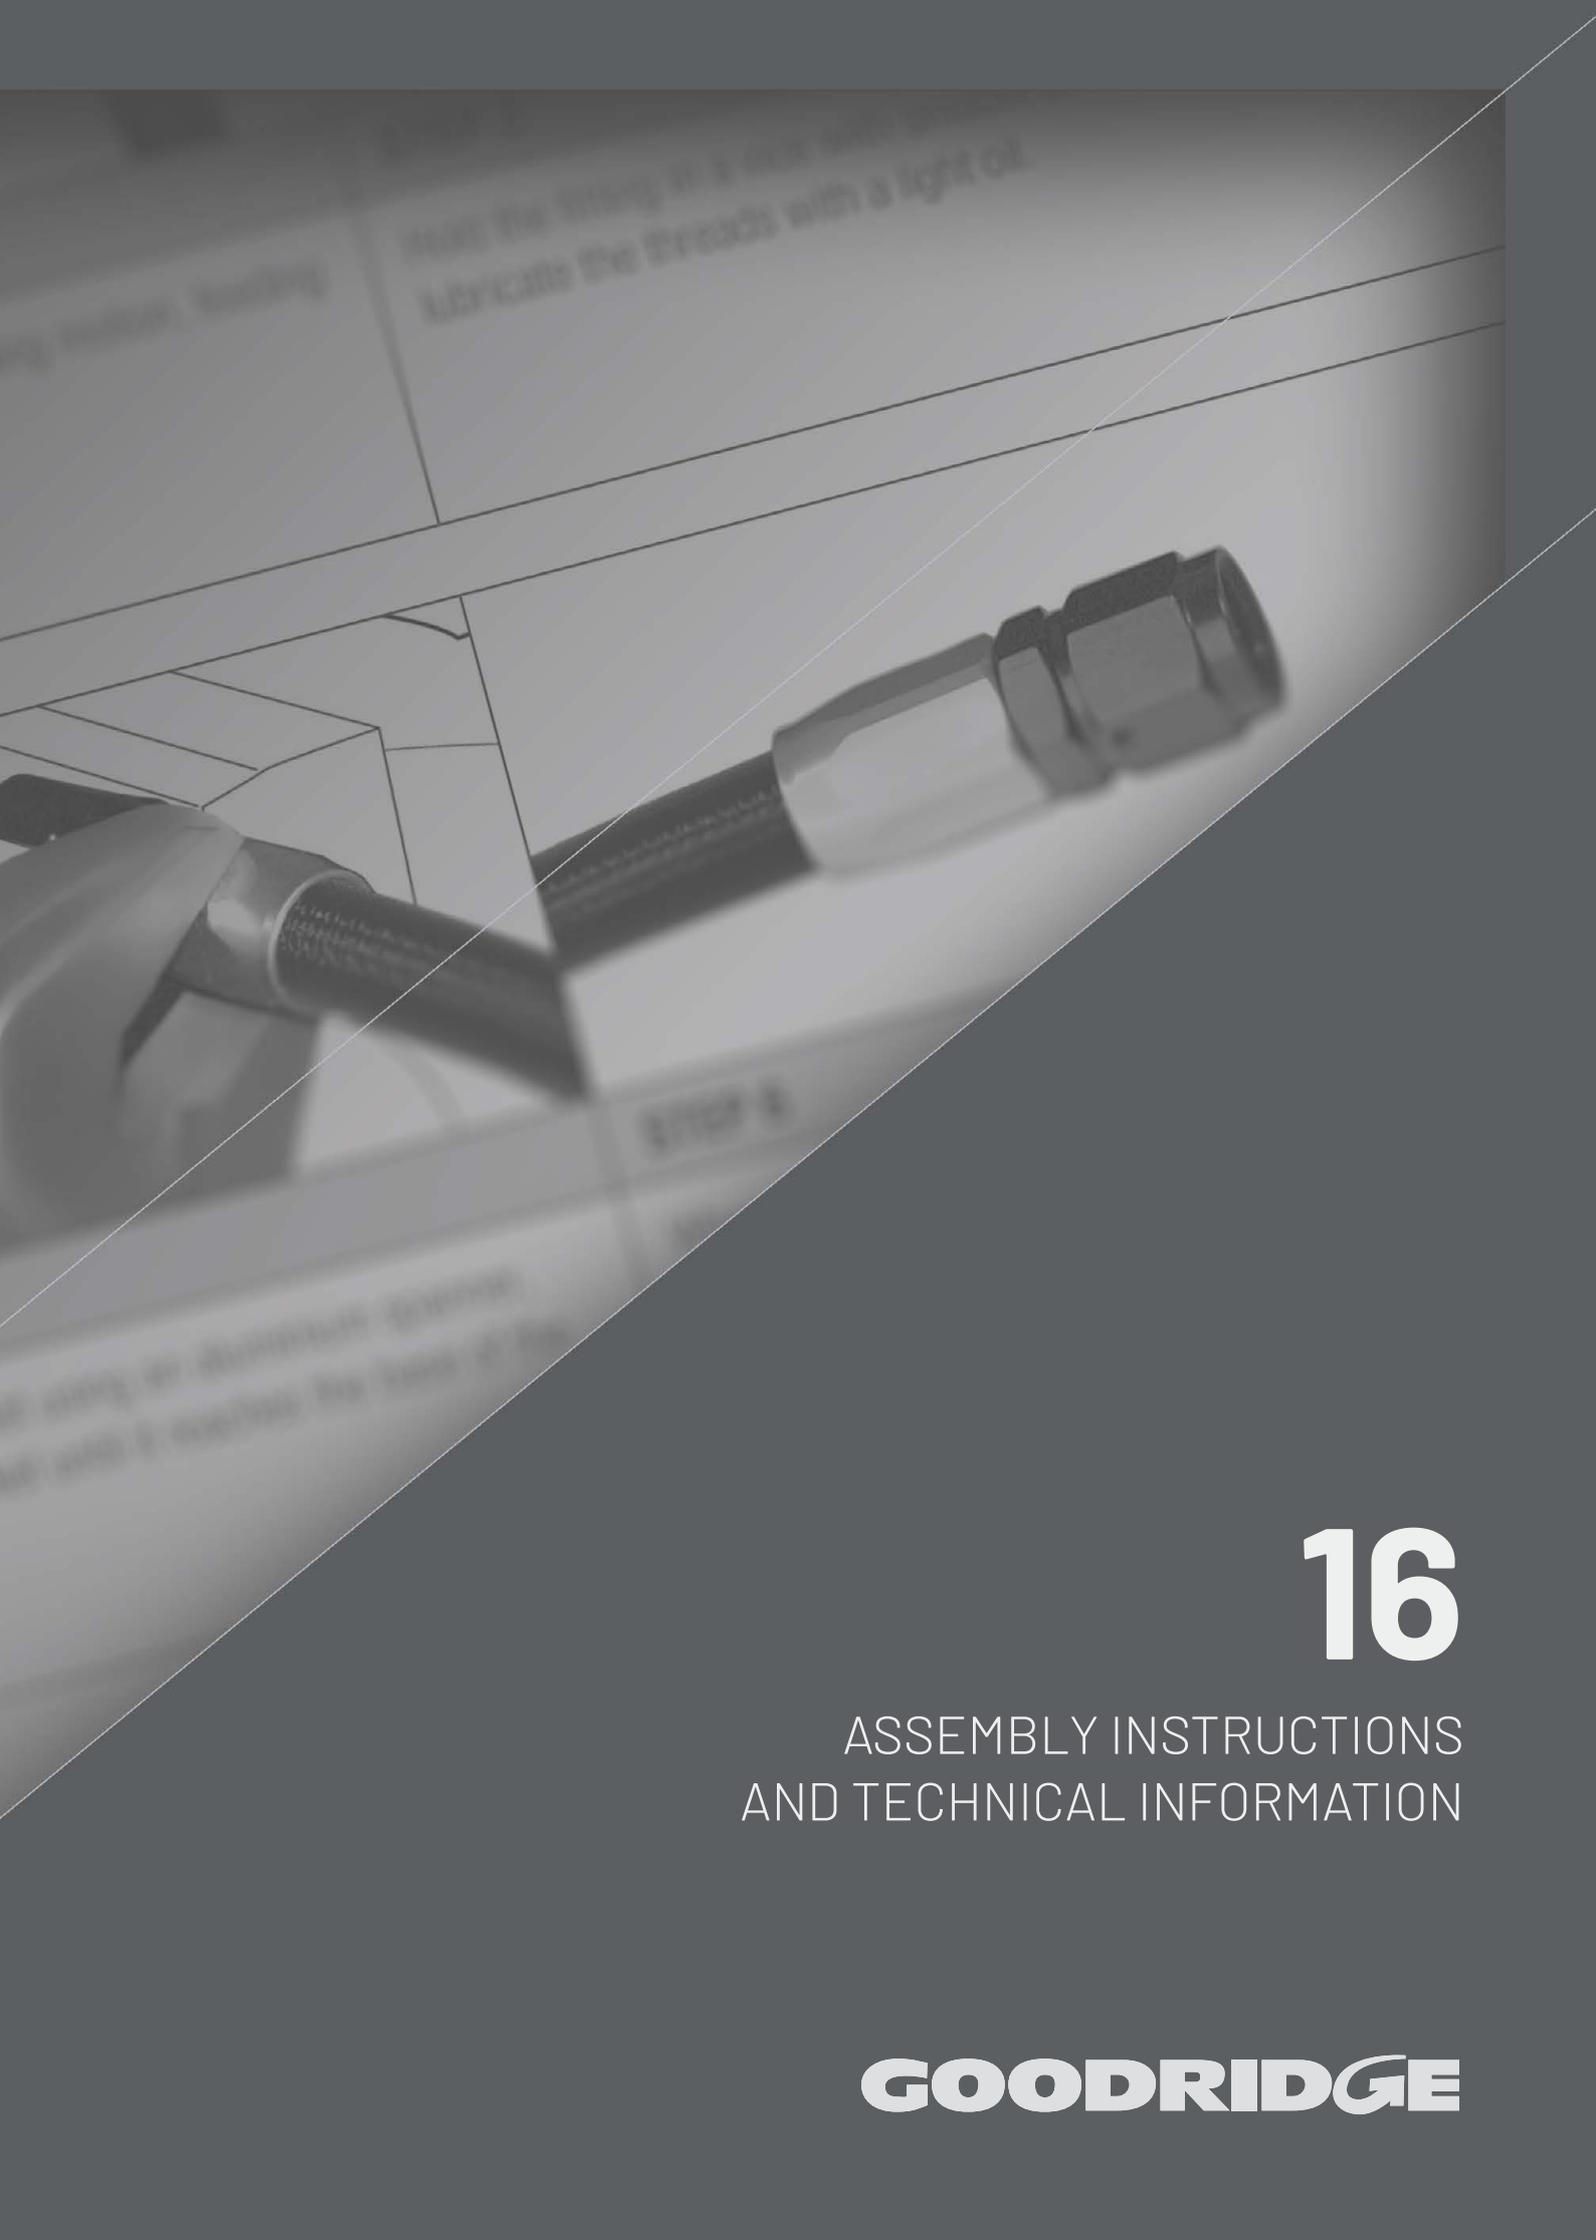

The Hyundai i30NTCR then enjoyed further success in 2019, with Norbert Michelisz of BRC Hyundai N Squadra Corse winning the 2019 WTCR Drivers' title and BRC Hyundai N Squadra Corse placing second in the 2019 WTCR Teams' standings. *A great result.*

Goodridge are proud to have been a part of this project, using over 50 years of experience and input from our global network; this is the perfect example of working in conjunction with a motorsport team to achieve a fantastic result, for both parties.

ASSEMBLY INSTRUCTIONS
AND TECHNICAL INFORMATION

GOODRIDGE

Note: Lubricate threads with duck oil before assembly (or a similar commercial lubricant may be used). Goodridge recommend that the finished assembly is fully pressure tested prior to use.

ASSEMBLY INSTRUCTIONS FOR 811 FITTINGS AND 910 SERIES HOSE

<p>STEP 1</p> <p>Remove socket from fitting and ensure the hose has clean square cut ends.</p>	<p>STEP 2</p> <p>Feed the hose into the socket with a turning motion, feeding the braid in as you turn the hose.</p>	<p>STEP 3</p> <p>Hold the fitting in a vice with smooth or soft jaws, and lubricate the threads with a light oil.</p>
<p>STEP 4</p> <p>Push the hose firmly onto the thread whilst rotating the hose and socket together. Hand tighten both the hose and socket until it becomes too tight to move.</p>	<p>STEP 5</p> <p>Finish tightening the socket using an aluminium spanner, continue turning the socket until it reaches the base of the thread.</p>	<p>STEP 6</p> <p>When the socket reaches the base of the thread keep turning for an extra 1.5 complete turns.</p>

ASSEMBLY INSTRUCTIONS FOR 236, 336 SERIES FITTINGS AND 200, 210 SERIES HOSE

<p>STEP 1</p> <p>Bind masking tape tightly around the hose at the required length and cut through using a fine tooth saw blade or cut off wheel, leaving tape on both ends so that it retains the braid. Clean any debris from both the cut ends and inside the hose.</p>	<p>STEP 2</p> <p>Socket (red) Main fitting body (blue) On a clean flat surface disassemble the fitting. This consists of two parts. Tip: Wrap some tape behind the socket to identify if the hose is being pushed out of the socket when tightening.</p>	<p>STEP 3</p> <p>Hold the socket in a smooth jaw vice and feed one end of the hose into the socket by turning clockwise and pushing until the hose finishes just behind the socket threads.</p>	<p>STEP 4</p> <p>Holding the main fitting body in the vice, lubricate the thread and push the hose and socket over the nipple end and start to thread the socket onto the fitting by hand.</p>
<p>STEP 5</p> <p>Finish tightening the socket onto the fitting using a good quality wrench until the socket is one full turn from the back of the of the fitting hex.</p>	<p>STEP 6</p> <p>Pressure test.</p>		

Material Key:

B: Brass, C: Stainless Steel, CH: Chrome Plated, D: Aluminium, P: Zinc Plated Carbon Steel, Z1: Silver Plated Carbon Steel

Note: Lubricate threads with duck oil before assembly (or a similar commercial lubricant may be used). Goodridge recommend that the finished assembly is fully pressure tested prior to use.

ASSEMBLY INSTRUCTIONS FOR TF-TU25 & 536 HOSE & PUSH FIT FITTINGS

<p>STEP 1</p> <p>Cut hose at the required length using a fine tooth saw blade or cut off wheel. Clean any loose debris from both the cut ends and inside the hose.</p>	<p>STEP 2</p> <p>Hold the fitting in a bench vice, lubricate the fitting tail and inside the hose.</p> <p>Tip: Submerge the end of the hose in hot water to soften and ease assembly.</p>	<p>STEP 3</p> <p>Push the hose over the fitting tail until it is tight behind the red hose finisher.</p>	<p>STEP 4</p> <p>Please Note: Straight female fittings require the use of a male adaptor during hose assembly to stop the fitting tail turning.</p>

ASSEMBLY INSTRUCTIONS FOR RE-USABLE 600 SERIES (PTFE SMOOTH BORE) HOSE & FITTINGS

<p>STEP 1</p> <p>Using a fine tooth saw blade or cut off wheel, cut hose to the required length. Clean any loose debris from both the cut ends and inside the hose. Note: Lubricate threads with Duck Oil before assembly. (or a similar commercial lubricant may be used)</p>	<p>STEP 2</p> <p>Main fitting body - Olive - Socket On a clean flat surface disassemble the fitting, this consists of 3 parts, the Main fitting body, Olive and Socket.</p>	<p>STEP 3</p> <p>Push two sockets back to back over the overbraid working from the non flared end</p>	<p>STEP 4</p> <p>Using an appropriate sized Goodridge mandrel, flare out both ends of the stainless steel overbraid from the PTFE inner tube</p>
<p>STEP 5</p> <p>Push an olive onto each end of the PTFE inner tube under the stainless steel over braid by hand and finish off by pushing against a flat solid surface making sure the PTFE tube is fully home in the olive.</p>	<p>STEP 6</p> <p>Holding the main fitting body in a smooth jaw vice, lubricate the thread and push the hose over the nipple end and start to thread the socket onto the fitting by hand.</p>	<p>STEP 7</p> <p>Finish tightening the socket onto the fitting with a good quality spanner until the socket is one full turn from the main fitting hex.</p> <p>PRESSURE TEST</p>	<p>UNDER NO CIRCUMSTANCES SHOULD THE SOCKET BE LOOSENED IN AN ATTEMPT TO ADJUST THE ALIGNMENT AFTER ASSEMBLY</p>

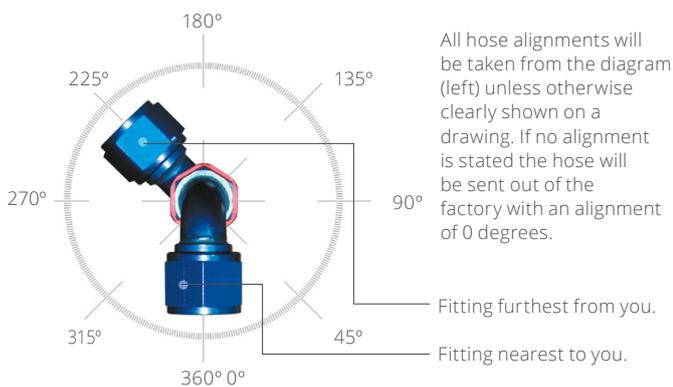

Note: Lubricate threads with duck oil before assembly (or a similar commercial lubricant may be used). Goodridge recommend that the finished assembly is fully pressure tested prior to use.

ASSEMBLY INSTRUCTIONS FOR HARDLINE AND FITTINGS

			
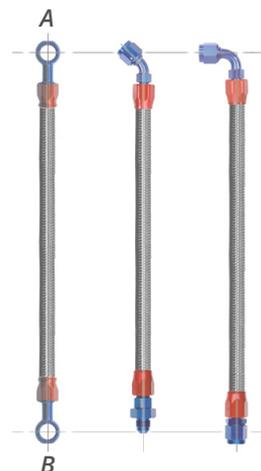

STEP 1 Bend tube to suit installation using a hardline bending tool and observing the minimum bend radius (15mm for -4 and -6 tube)	STEP 2 Debur and remove any loose pieces of Hycot® cover. Measure and mark 21mm from the end of the hose.	STEP 3 Slide socket and olive onto hose until it reaches the 21mm mark made in step 2	STEP 4 Using an appropriate spanner, assemble the socket until the socket completely covers exposed threads (2mm - 2.5mm between socket and hex)
STEP 5 Assemble other end repeating steps 1-4 and pressure test assembly.	NOTES 1. Once assembled, the hardline fitting should NOT be loosened and re-assembled. The olive is permanently attached after assembly and cannot be removed. 2. For production, we recommend building one template and copying all bends and dimensions from this master sample.

CORRECT ALIGNMENTS

CORRECT MEASUREMENTS

The following instructions are designed to eliminate confusion and ensure that correct hose lengths are supplied for assembly. When ordering hose assemblies please make sure the following instructions are followed. All measurements are taken from the center of seat **A** to the center of seat **B**. This will apply in all cases unless CLEAR instructions are given on purchase order or a drawing supplied.

HOSE ASSEMBLY INSTRUCTIONS

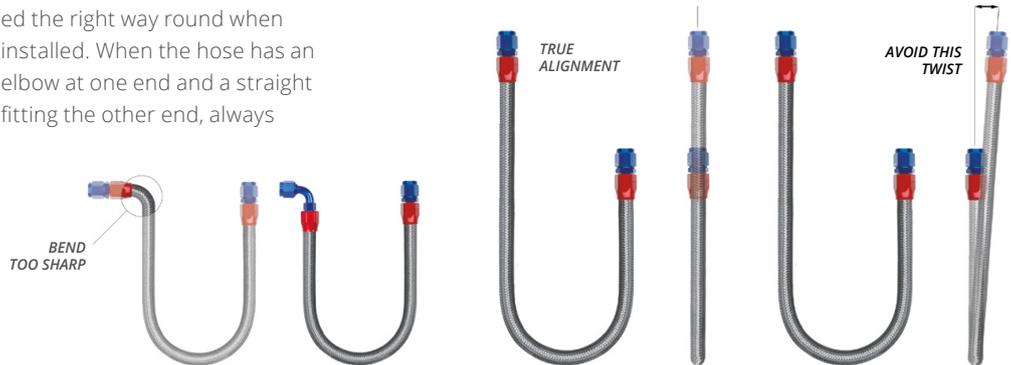

Wherever a hose assembly is used in either a static or dynamic flexing application, it is necessary to ensure that the center line bend radius is not taken below the minimum bend radius for the hose. Hose assemblies should not be installed in such a manner that a torque loading is imposed, either during installation, or in subsequent use. Torque loading of the hose creates stresses in the hose, which can shorten the hose life, or cause the hose to collapse. Whilst assembling the second end fitting, especially if it is a female union type or fitting, it is necessary to ensure that the final tightening of the nut does not also rotate the spigot, thus imposing the torque

to the hose. In the case of reusable fittings the hex on the body should be held with a spanner to prevent rotation. When the hose includes elbow fittings at both ends, it is important to ensure the correct alignment of the elbows relative to each other during hose manufacture. It is important to ensure that the hose is connected the right way round when installed. When the hose has an elbow at one end and a straight fitting the other end, always

connect the elbow end first, to prevent possible mis-alignment. In applications where the hose undergoes dynamic flexing, it is necessary to ensure that all bends in the hose are in one plane. A hose which is bent in two or more planes and then flexed is subject to torsional forces which may damage the hose.

Damage

Any visible evident damage to the hose, such as broken strands of braid, or severe distortion of the hose, or damage to the end fittings is cause for the hose to be withdrawn from service. The cause of the damage should then be identified, and steps taken to ensure that it does not re-occur.
